

Question	CO
Define the core components of the Android Application Architecture.	CO1
What is the purpose of an Intent in Android development?	CO1
Explain the lifecycle of an Android Activity with a neat diagram.	CO2
Describe the steps involved in debugging an Android application using the IDE.	CO1
Discuss the different types of Intents (Explicit and Implicit) and demonstrate how to use the Intent object to invoke built-in applications.	CO2
Compare and contrast Activities and Fragments. Explain how Fragments contribute to a flexible UI design.	CO2
Define the core components of Android Application architecture	CO1
Explain the function of Action bar in a mobile application	CO2
Describe the importance of Logcat messages during the debugging process.	CO3
Write a code snippet to add a simple menu to an existing activity	CO2
Construct a layout for an "About Box" using XML declaration.	CO1
Outline the code steps required to send an SMS message from an app	CO3
Compare consuming Web Services using HTTP versus consuming JSON services.	CO4
Mention two ways to manage changes in screen orientation.	CO2
What is a WebView and when should it be used?	CO2
Explain how to persist data using SharedPreferences with a code snippet.	CO3
Describe the role of the Action Bar in enhancing user navigation.	CO2
Elaborate on the process of creating and using a SQLite database in Android for data persistence.	CO3
Analyze the use of List Views and Picker Views. How do you handle long lists efficiently in Android?	CO2
What is meant by "Designing by Declaration"?	CO2
Why are Log messages important during the debugging process?	CO3
How do you implement an "About Box" and apply a custom theme to an Android application?	CO2
Explain the use of alternate resources (like layout-land or values-es) in Android.	CO2
Explain the Android Activity Lifecycle and its various states	CO2

Question	CO
Propose a UI strategy using Picker Views and List Views to handle long sets of data	CO2
Describe how to manage changes to screen orientation and adapt display orientations	CO1
Explain the process of creating a Splash Screen and applying a theme to the app.	CO3
Describe the architecture of SQLite and how "Data Binding" works with databases	CO3
Demonstrate the process of persisting data to files and creating an internal database.	CO3
Critically evaluate the process of preparing an app for publishing and deployment	CO4
Design a workflow for creating a professional opening screen (Splash Screen) including the addition of menus and settings.	CO2
Contrast debugging using Logcat versus using the integrated Debugger tool in the IDE. When is each most effective?	CO3
What is the primary function of a Content Provider?	CO3
Define the difference between Internal Storage and SD Card access.	CO3
Explain the steps required to consume a JSON-based Web Service using HTTP.	CO4
Describe how to get and monitor location data using Android Location Services.	CO3
Examine the process of preparing an app for publishing, including APK generation and uploading to the Market.	CO4
Discuss the different types of Intents (Explicit and Implicit) and demonstrate how to use the Intent object to invoke built-in applications.	CO2
Compare and contrast Activities and Fragments. Explain how Fragments contribute to a flexible UI design.	CO2
Elaborate on the process of creating and using a SQLite database in Android for data persistence.	CO3
Design a workflow for creating a professional opening screen (Splash Screen) including the addition of menus and settings.	CO3
Discuss the concept of Threading in Android. Why is it essential when binding Activities to Services?	CO4
Discuss the concept of Threading in Android. Why is it essential when binding Activities to Services?	CO4

Question	CO
List the four main Android Application Components.	CO1
Interpret the role of the AndroidManifest.xml file in an Android project.	CO1
Write the code snippet to start a new activity using an Intent.	CO2
Distinguish between the onPause() and onStop() methods in the Activity lifecycle.	CO2
Justify the use of SharedPreferences over a SQLite database for saving small user settings.	CO2
Formulate a basic JSON structure to represent a "User" object for a web service.	CO4
