

Unit I: Introduction, Components, and Activities

Focus: History, Architecture, Development Environment, Activities, and Fragments.

Marks	Question	CO	BTL
2	Define the core components of the Android Application Architecture.	CO1	L1 (Remember)
2	What is the purpose of an <code>Intent</code> in Android development?	CO1	L1 (Remember)
5	Explain the lifecycle of an Android Activity with a neat diagram.	CO2	L2 (Understand)
5	Describe the steps involved in debugging an Android application using the IDE.	CO1	L2 (Understand)
10	Discuss the different types of Intents (Explicit and Implicit) and demonstrate how to use the Intent object to invoke built-in applications.	CO2	L3 (Apply)
10	Compare and contrast Activities and Fragments. Explain how Fragments contribute to a flexible UI design.	CO2	L4 (Analyze)
Export to Sheets			

Unit II: User Interface, Persistent Data, and Databases

Focus: Screen orientation, UI Views, Preferences, and SQLite.

Marks	Question	CO	BTL
2	Mention two ways to manage changes in screen orientation.	CO2	L1 (Remember)
2	What is a <code>WebView</code> and when should it be used?	CO2	L1 (Remember)
5	Explain how to persist data using <code>SharedPreferences</code> with a code snippet.	CO3	L3 (Apply)
5	Describe the role of the Action Bar in enhancing user navigation.	CO2	L2 (Understand)
10	Elaborate on the process of creating and using a SQLite database in Android for data persistence.	CO3	L3 (Apply)
10	Analyze the use of List Views and Picker Views. How do you handle long lists efficiently in Android?	CO2	L4 (Analyze)

Unit III: Designing User Interface and Debugging

Focus: Declaration-based design, Resources, Themes, and Advanced Debugging.

Marks	Question	CO	BTL
2	What is meant by "Designing by Declaration"?	CO2	L1 (Remember)
2	Why are Log messages important during the debugging process?	CO3	L2 (Understand)
5	How do you implement an "About Box" and apply a custom theme to an Android application?	CO2	L3 (Apply)
5	Explain the use of alternate resources (like layout-land or values-es) in Android.	CO2	L2 (Understand)
10	Design a workflow for creating a professional opening screen (Splash Screen) including the addition of menus and settings.	CO2	L6 (Create)
10	Contrast debugging using Logcat versus using the integrated Debugger tool in the IDE. When is each most effective?	CO3	L4 (Analyze)
Export to Sheets			

Unit IV: Content Providers, Services, and Publishing

Focus: SMS/Email, Location, Web Services (JSON), and APK Deployment.

Marks	Question	CO	BTL
2	What is the primary function of a Content Provider?	CO3	L1 (Remember)
2	Define the difference between Internal Storage and SD Card access.	CO3	L2 (Understand)
5	Explain the steps required to consume a JSON-based Web Service using HTTP.	CO4	L3 (Apply)
5	Describe how to get and monitor location data using Android Location Services.	CO3	L2 (Understand)
10	Examine the process of preparing an app for publishing, including APK generation and uploading to the Market.	CO4	L5 (Evaluate)
10	Discuss the concept of Threading in Android. Why is it essential when binding Activities to Services?	CO4	L4 (Analyze)

-Mark Questions (Short Answer)

BTL Level	Question	CO Reference
L1: Remember	List the four main Android Application Components.	CO1
L2: Understand	Interpret the role of the <code>AndroidManifest.xml</code> file in an Android project.	CO1
L3: Apply	Write the code snippet to start a new activity using an <code>Intent</code> .	CO2
L4: Analyze	Distinguish between the <code>onPause()</code> and <code>onStop()</code> methods in the Activity lifecycle.	CO2
L5: Evaluate	Justify the use of <code>SharedPreferences</code> over a SQLite database for saving small user settings.	CO2
L6: Create	Formulate a basic JSON structure to represent a "User" object for a web service.	CO4
